Office Action Summary	Application No. 09/446,550	Applicant(s) ISELE ET AL.	
	Examiner C. Lynne Anderson	Art Unit 3761	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 30 September 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-25 is/are pending in the application.
- 4a) Of the above claim(s) 15-20 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-14 and 21-25 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☒ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 30 September 2005 has been entered.

Response to Arguments

Applicant's arguments with respect to claims 1-15 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-14 and 21-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dobrin et al. (5,628,737) in view of Wu et al. (5,865,926).

Dobrin discloses all aspects of the claimed invention with the exception of a particulate filler material imbedded in the polymeric film layer. Dobrin discloses an absorbent article 20, as shown in figure 2, comprising a core region 74, and a chassis region 76 surrounding the core region 74. The article 20 further comprises a laminate

Art Unit: 3761

95, as shown in figure 3, which extends into both the core region 74 and the chassis region 76 to form a core backsheet and a chassis backsheet. The laminate 95 comprises a polymeric film layer 26, as described in column 6, lines 42-43, and a fibrous layer 90, as described in column 9, lines 51-52. The laminate 95 is a breathable, unitary layer. The laminate 95 comprises apertures 84 in the chassis region 76, giving the chassis region 76 a higher degree of breathability than the core region 74, and therefore the MVTR value of the core region 74 is lower than that of the chassis region 76.

Wu discloses a breathable laminate for use in an absorbent article, as disclosed in column 4, lines 37-42, comprising a polymeric film layer and a fibrous layer, as described in column 2, lines 60-64. The polymeric film comprises a polymeric matrix and a particulate filler material, as disclosed in column 3, lines 2-17. The breathability of the laminate is enhanced by the formation of cracks around the particulate filler material, as disclosed in column 3, lines 19-21. The laminate is passed through a pair of rolls comprising ridges and grooves which provides a multiplicity of corrugations to the laminate, as disclosed in column 4, lines 51-65, and shown in figure 2.

It would therefore be obvious to one of ordinary skill in the art at the time of invention to construct the laminate of Dobrin using the polymeric film layer of Wu to increase the breathability of the laminate.

With respect to claim 2, Dobrin discloses the polymeric film layer 26 is wider than the fibrous layer 90, as described in column 10, lines 7-9.

With respect to claims 3 and 4, Wu discloses a MVTR of at least 500 g/24hr/m², as described in Table II.

With respect to claims 5 and 6, Dobrin discloses all aspects of the claimed invention but remains silent as to how much greater the transmission rate of the chassis region is than the transmission rate of the core region. The chassis region is apertured to increase its breathability, and therefore has a higher transmission rate than the core region.

With respect to claim 7, Wu discloses the filler material is calcium carbonate, as described in column 3, lines 14-17.

With respect to claim 8, Wu discloses the laminate has a basis weight of about 64 gsm (Table II), and the nonwoven web has a basis weight of about 20 gsm (column 4, line 29), and therefore the basis weight of the polymeric layer is less than 50 gsm.

With respect to claim 9, Wu discloses the laminate has a basis weight of less than 70 gsm, as disclosed in Table II.

With respect to claim 10, Dobrin discloses the fibrous layer 90 is a non-woven web, as described in column 9, line 52, and Wu discloses a non-woven web in column 4, lines 10-12.

With respect to claims 11 and 13, Wu discloses combining the polymeric layer and the fibrous layer by thermobonding and adhesive bonding, as described in column 3, lines 5-8.

With respect to claim 12, Wu discloses the polymeric layer and the fibrous layer are combined by extrusion, as disclosed in column 6, lines 18-21.

Art Unit: 3761

With respect to claim 14, Dobrin discloses a baby diaper, as shown in figure 1.

With respect to claims 21 and 22, Dobrin discloses the polymeric layer 26 is a unitary layer extending both into the core and the chassis to form the backsheet material 95.

With respect to claim 23, Wu discloses the laminate has a basis weight of about 64 gsm (Table II), and the nonwoven web has a basis weight of about 20 gsm (column 4, line 29), and therefore the basis weight of the polymeric layer is greater than 25 gsm.

With respect to claim 24, Wu discloses the polymeric layer comprises a polymeric matrix and a particulate filler material, as disclosed in column 3, lines 35-38.

With respect to claim 25, Wu discloses an activation process comprising passing the laminate through a roll pair comprising ridges and grooves, as shown in figure 2, to provide a multiplicity of grooves.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to C. Lynne Anderson whose telephone number is (571) 272-4932. The examiner can normally be reached on Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tanya Zalukaeva can be reached on (571) 272-1115. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

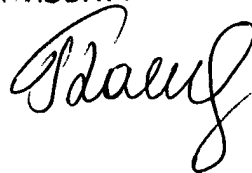

Art Unit: 3761

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
